Editors of the journal ECONOMIC BOTANY and their terms

Richard Evans Schultes	January, 1962 -
David J. Rogers	July, 1960 - December, 1961
Bernice G. Schubert	January, 1960 - June, 1960
David J. Rogers	July, 1957 - December, 1959
Edmund H. Fulling	January, 1947 - June, 1957

Presidents of THE SOCIETY FOR ECONOMIC BOTANY and their terms

Otto Frankel, Bart.	1967 - 1968
Albert F. Hill	1966 - 1967
Edgar Anderson	1965 - 1966
Ivan A. Wolfe	1964 - 1965
S. Morris Kupchan	1963 - 1964
Paul C. Mangelsdorf	1962 - 1963
Carl O. Erlanson	1961 - 1962
Ernest Guenther	1959 - 1961

Reports from across the country and abroad have indicated that ECONOMIC BOTANY, founded by Edmund H. Fulling twenty-one years ago, has been filling an ever growing need in the botanical and related fields. Its policy from the start has fostered the publication of articles of a review nature as well as those reporting new advances. Furthermore, it has from the start kept its interdisciplinary outlook—a point of view sorely needed in an age when the once strict boundaries between the sundry fields of science are giving way rapidly.

The first twenty volumes of ECONOMIC BOTANY represent most certainly an emporium of miscellaneous information hard to come by elsewhere, yet of immediate concern. The indices for each individual volume, while adequate, fail easily to unlock this wealth of information. There have been many requests for a cumulative index—more complete in detail than the yearly indices and, naturally, wholly inclusive. It has seemed that the completion of the twentieth volume might be an appropriate time for such a definitive effort.

It was originally planned to issue a conventional index which would have meant breaking down each volume on cards, then alphabetizing and ordering them. When the Council of the Society for Economic Botany first approached Biological Abstracts, Mrs. Phyllis V. Parkins and Mr. Robert R. Van Gulick suggested that we use the computer files of Biological Abstracts to produce a permuted title index. This B.A.S.I.C. index has been enriched by the addition of all taxonomic concepts mentioned from the rank of genus and below.

The officers of the Society and the editor of ECONOMIC BOTANY wish to express their appreciation to Biological Abstracts not only for preparing this index but for printing it as well. The meticulousness of the work will enhance even more the value of the first twenty volumes of ECONOMIC BOTANY to those who, in the years to come, will have occasion to prove its worth.

Richard Evans Schultes
Editor

Instructions for Using the ECONOMIC BOTANY Subject Index

In order to make available the wealth of material contained in Volumes 1 through 20 (1947-1966) of ECONOMIC BOTANY, this computer-based index uses significant words from the titles of articles as well as additional words from the articles inserted editorially to supplement deficient titles. These added words include: families when cited, the genus and species of the plants studied, their common names, uses and geographical locations, plus other pertinent information. Where a plant taxon or common name appears, it is followed by one of the letters "-D" (dicotyledon), "-G" (gymnosperm), "-M" (monocotyledon) or "-P" (pteridophyte). Nonsignificant words as well as Announcements, Notices, Book Reviews and News of the Society for Economic Botany have been omitted.

The significant or key words are positioned alphabetically at the beginning of the center file of a column (see facing page). Additional subject or modifying words precede and follow the featured word; these extra words help in locating pertinent references to the subject being searched. For example, a paper titled "Fungal protein for food and feeds" would appear alphabetically under the key words: "fungal," "protein," "food," "feeds" with modifying words on both sides of each listing.

Using the Index: Scan vertically the alphabetically arranged, topical subject index. When a significant word is found, glance at the nearby modifying words for further meaning and content. If interest is confirmed, note the six-digit number at the right of the column. The first two digits indicate the *volume* (if the volume number is less than ten, a blank appears in the first space), the third digit the *issue* and the last three digits the *page* of the article containing the featured word. Now refer to the corresponding issue and article of ECONOMIC BOTANY.

In searching for articles on a specific subject, it is useful to list alphabetically all possible terms (including synonyms and variations in spelling) that might apply. Vertical scanning of the Index for the terms so listed should locate pertinent articles in the appropriate issues of ECONOMIC BOTANY.
