Supplementary Table S1. Dataset used in this study. Abbreviations include SSD (sexual size dimorphism), NestSite (site used by a species for laying their eggs, where 1=water, 2=terrestrial soil, 3=burrows, 4=vegetation, 5=parental body), MMC (male-male competition, where 1=observed, NA=no data available – this applies for this and for the remaining variables), Activity (diel activity across 24h cycles, where 1=nocturnal, 2=cathemeral, 3=diurnal, 4=crepuscular), MHabitat (microhabitat preference, where 1=aquatic, 2=semi-aquatic, 3=terrestrial, 4=fossorial, 5=plant dwellers), MAT (mean annual temperature, in degrees Celsius), TSs (temperature seasonality, degrees Celsius), MAPp (mean annual precipitation), PpSs (precipitation seasonality), and OxC (percentage of oxygen concentrations in the atmosphere). Species names match the nomenclature used in Jetz & Pyron's (2018) phylogeny to facilitate replication of analyses. See main text for details about these variables.

Family	Species	SSD	NestSite	MMC	Fecundity	Activity	MHabitat	Latitude	MAT	TSs	MAPp	PpSs	OxC
